

DEVELOP A SIMPLE EMAIL AUTOMATION SERVICE USING SALESFORCE

AIM:

To develop a simple email automation service using Salesforce.

PROCEDURE:

1. Log in to Salesforce:

- Open your browser and go to [Salesforce](https://www.salesforce.com) and log in with your credentials.

2. Go to Setup:

- Click the **Setup** gear icon at the top-right of the Salesforce interface and select **Setup**.

3. Open Flow Builder:

- In the left-hand menu, search for **Flow** using the Quick Find box.
- Click on **Flows** under **Process Automation**.

4. Create a New Flow:

- Click on **New Flow**.
- You will be prompted to choose the flow type. Select **Record-Triggered Flow** to start the automation when a record is created or updated.
- Click **Create**.

5. Configure Trigger:

- Select the **Object** you want to trigger the flow for (e.g., **Lead, Account, Contact**, etc.).
- Choose whether to trigger the flow **when a record is created, updated, or created or updated**.
- Set the condition that triggers the email (e.g., when a lead's status is set to "Qualified").

6. Add an Action (Send Email):

- In the Flow Builder, click the + icon to add an element.
- From the menu, select **Action**.
- In the **Action** type, search for **Send Email**.

- You will need to configure:
 - **Recipient:** Choose the email field from the record (e.g., Lead's email).
 - **Email Template:** Select an existing template or create a new one.
 - **From Address:** Choose an appropriate "From" email address (either system email or a user's email). If **Send Email** is not directly available, you'll need to create an **Email Alert** first.

7. (Optional) Create an Email Alert:

- If **Send Email** doesn't appear in the action list, go to **Setup > Email Alerts**.
- Click **New Email Alert**, give it a name, and select:
 - **Object:** The same object as in the Flow (e.g., Lead).
 - **Email Template:** Choose a predefined template or create a new one.
 - **Recipient:** Add who will receive the email (e.g., the Lead's email).
- After creating, go back to your Flow and choose **Send Email** using this Email Alert.

8. Activate and Save the Flow:

- Once you've configured the email sending action, click **Save**.
- Click **Activate** to make the flow live.

9. Test Your Automation:

- To ensure your automation works, create a new lead or update an existing record based on the criteria you've set in the flow.
- Check the recipient's inbox to confirm the email is sent.

OUTPUT:

Start your free trial today.

No credit card required, no software to install.

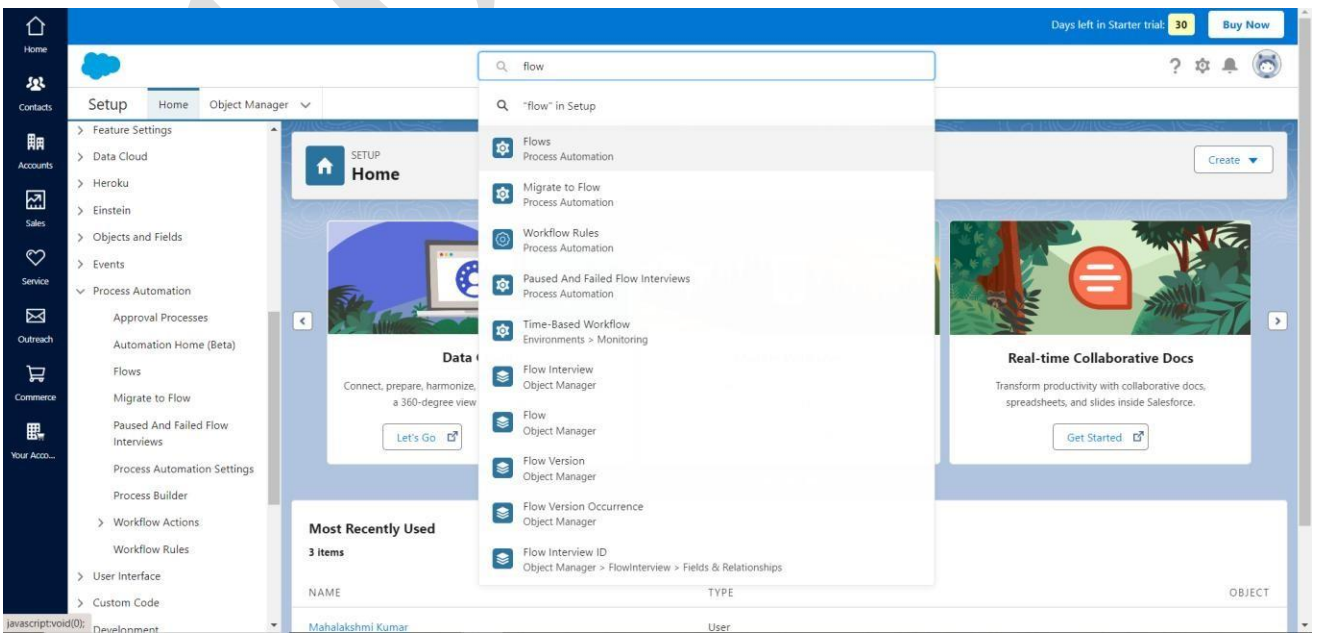

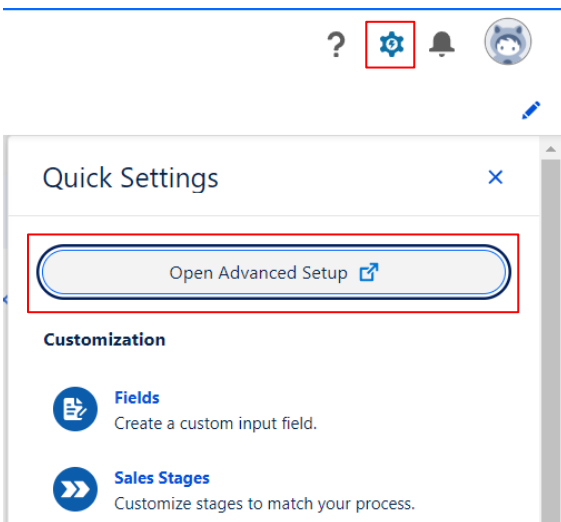

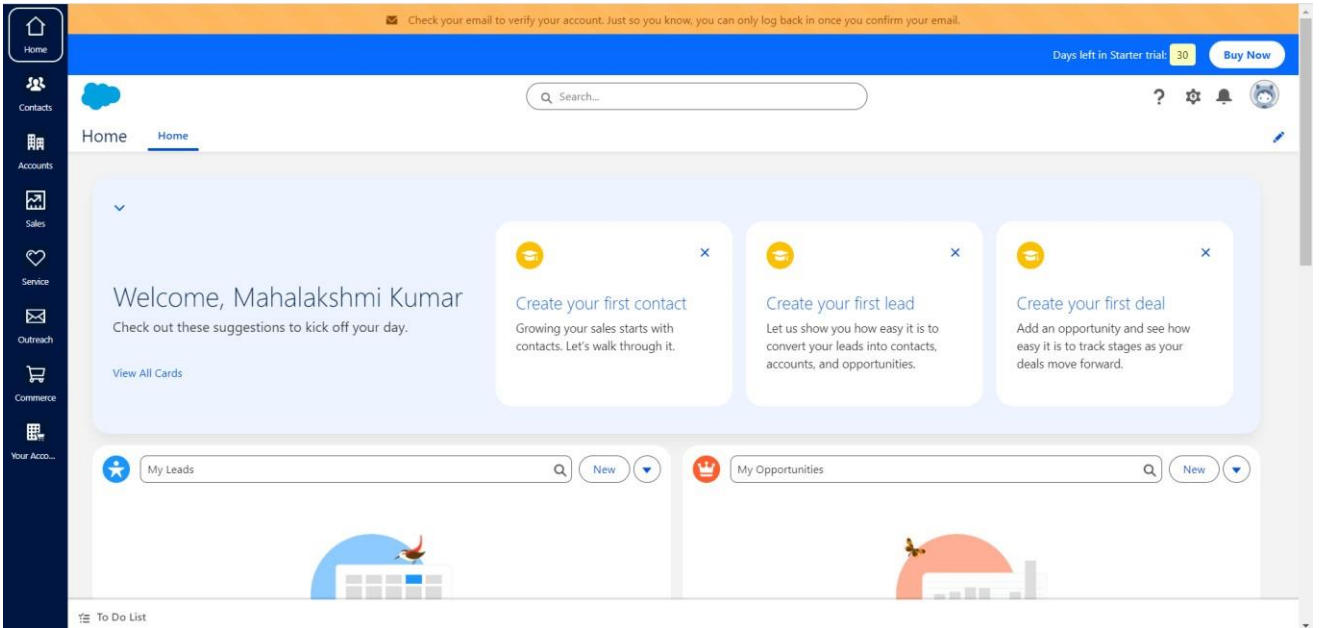

With your trial, you get:

- ✓ Pre-loaded data or upload your own
- ✓ Pre-configured processes, reports, and dashboards
- ✓ Guided content, how-tos, and best practices for sales

Sign up now to start your free trial.

Complete the form to start your free trial. Our team will be in touch to help you make the most of your trial.

Try the Automation Lightning App!

These new features are available only in the Automation Lightning app:

- Search for automations
- Sort your list views with more options
- Organize your automations with categories and subcategories.

If you don't see the app in the App Launcher, check that Enable the Automation Lightning App is selected in Process Automation Settings.

Screen Flow

Guides users through a business process that's launched from Lightning pages, Experience Cloud sites, quick actions, and more.

Schedule-Triggered Flow

Launches at a specified time and frequency for each record in a batch. This autolaunched flow runs in the background.

Autolaunched Flow (No Trigger)

Launches when invoked by Apex, processes, REST API, and more. This autolaunched flow runs in the background.

Record-Triggered Flow

Launches when a record is created, updated, or deleted. This autolaunched flow runs in the background.

Platform Event—Triggered Flow

Launches when a platform event message is received. This autolaunched flow runs in the background.

Segment-Triggered Flow

Launch after the segment you select is received.

Record-Triggered Flow

Object: Select an object

Trigger: **A record is created**

Optimize for: **Actions and Related Records**

Open Flow Trigger Explorer

End

Configure Start

Select Object

Select the object whose records trigger the flow when they're created, updated, or deleted.

* Object

Search objects...

Configure Trigger

* Trigger the Flow When:

☒ A record is created

☐ A record is updated

☐ A record is created or updated

☐ A record is deleted

Set Entry Conditions

Specify entry conditions to reduce the number of records that trigger the flow and the number of times the flow is executed. Minimizing unnecessary flow executions helps to conserve your org's resources.

If you create a flow that's triggered when a record is updated, we recommend first defining entry conditions. Then select the **Only when a record is updated to meet the condition requirements** option for When to Run the Flow for Updated Records.

+ Add Condition

* Optimize the Flow for:

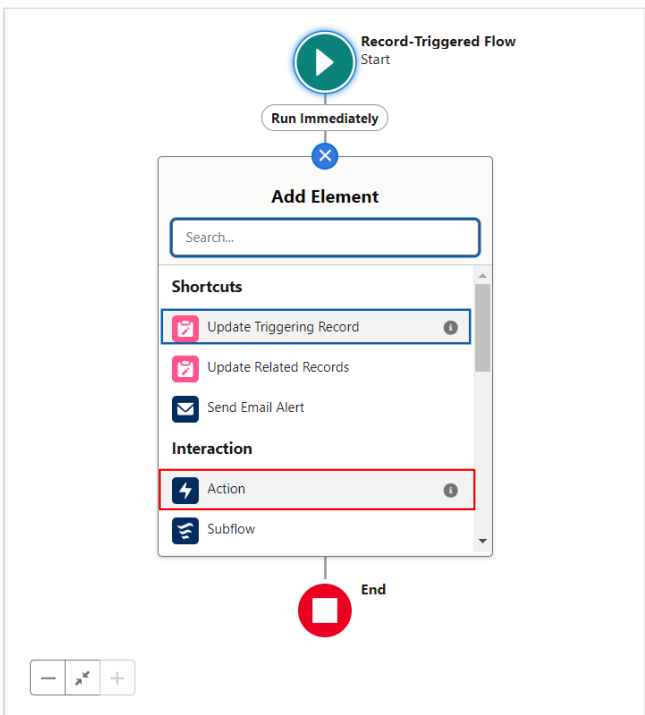

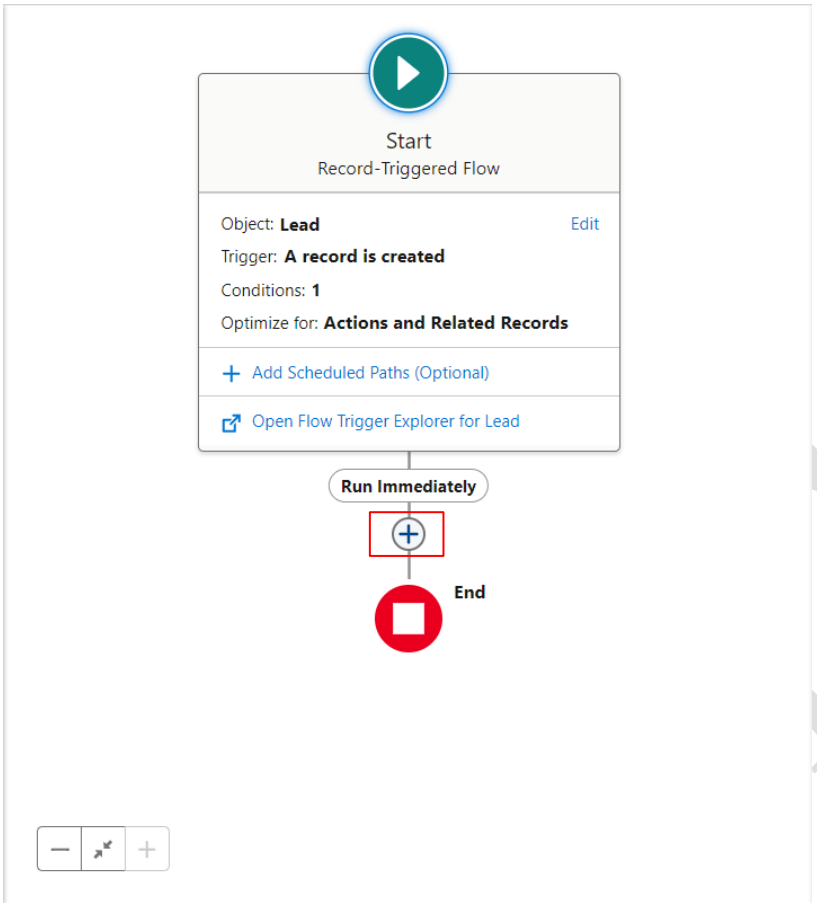

Fast Field Updates

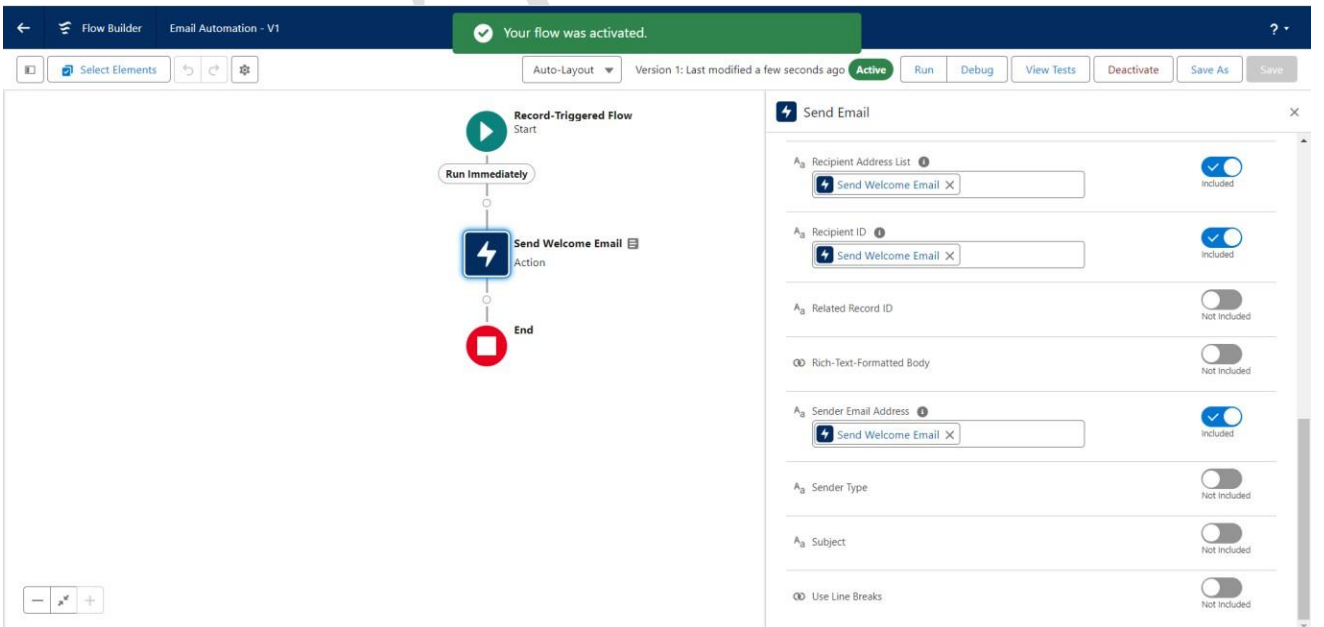

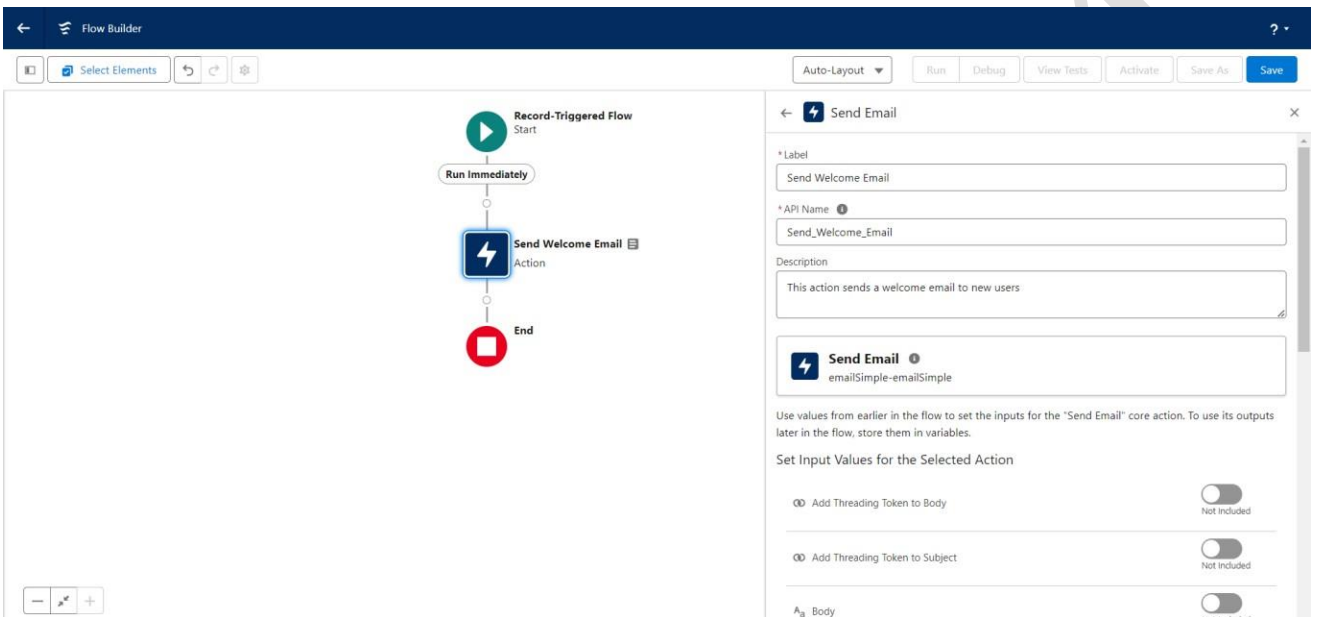

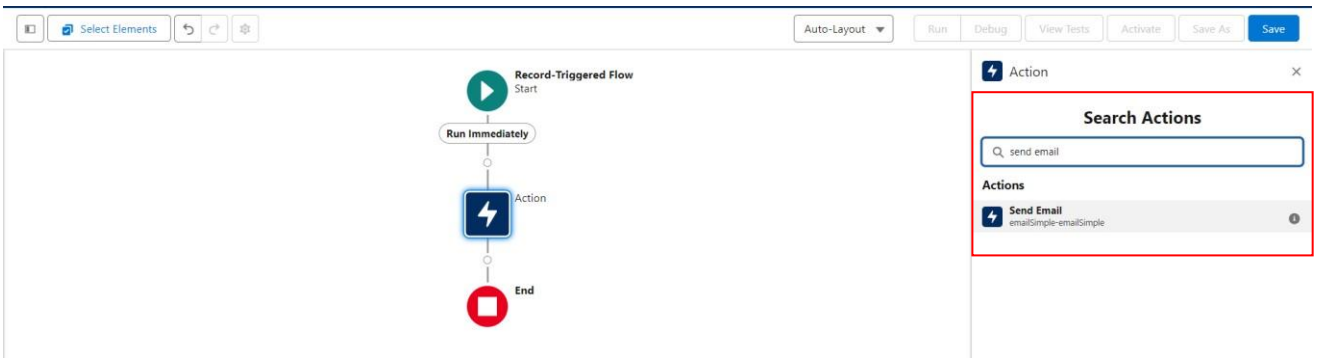

Update fields on the record that triggers the flow to run. This high-performance flow runs *before* the record is saved to the database.

Actions and Related Records

Update any record and perform actions, like send an email. This more flexible flow runs *after* the record is saved to the database.

☐ Include a Run Asynchronously path to access an external system after the original transaction for the triggering record is successfully committed

RESULT:

Thus, to develop a simple email automation service using Salesforce was completed successfully.
